

truSculpt.3D

CRYOLIPOLYSIS

TECHNOLOGY

Radio frequency energy sent through a handheld device that glides on the surface of the skin. It heats up fat cells, causing apoptosis (fat cell destruction). Fat cells that are destroyed are absorbed by the body and eliminated.

Pulls fat into a cuplike device. The skin is held in device then receives a cold treatment which freezes fat cells. Once frozen, they die and are eliminated from the body.

TIME

15 minutes (per treatment area)

35 minutes (per treatment area)

PROCEDURE COST

Competitive to similar options

Can be up to 2x as much per treatment

COMFORT

Hot stone massage

Initial tugging followed by cooling

EFFICACY

Up to 24 percent average reduction*, skin tightening, possible cellulite reduction

22 percent average reduction*
